REDUCTION STRATEGY

SAY NO TO LANDFILL

Working in partnership with Stericycle, we send all clinical waste to a brand new sustainable waste management facility in Telford.

Using the latest technology to steam treat clinical waste, it is then used as a fuel for power generation & other industrial purposes.

This process diverts 7300 tons of waste away from landfill each year.

Low carbon routing using industry leading telematics and navigation software.

UK sourced product keeping distance travelled to a minimum, reducing our footprint further.

Accreditations QMS Standards ISO9001, ISO14001, ISO45001 and Wamitab certified.
